

Power wheelchairs

Alternative Drive Controls

permobil

Adaptability where
you need it most

Omni2

The Omni2 display and interface module is compatible with many alternative drive controls, including both on-chair and aftermarket options. Full operation of the wheelchair’s functions, including drive, seating, and more, can be achieved through the drive control and Omni2.

Product highlights:

- High-resolution display
- Built-in Bluetooth® for mouse emulation or iDevice switch control
- Built-in Infrared for environmental control
- Adjustable swing-away mounting hardware

Bluetooth is a trademark of Bluetooth SIG.

Compact Joystick

Designed to provide a standard force and throw in the smallest possible package, the Compact Joystick is useful for both hand and chin control.

Compact Joystick Lite

Provides a light force and reduced throw option in a compact package, making it ideal for chin control or for individuals with upper extremity weakness or limited range of motion.

Mini Joystick

Designed for individuals with minimal range of motion and strength, the Mini Joystick is ideal for use in finger, chin and lip control applications.

Joystick throw
Neutral to full deflection

Joystick force

Compact Joystick	7.8 oz (220 g)
Compact Joystick Lite	1.8 oz (50 g)
Mini Joystick	0.5 oz (13 g)

Note: Joystick performance can be further customized through wheelchair programming

ASL FUSION Proportional and Digital Head Array

The ASL FUSION Proportional and Digital Head Array is customizable via programming to accommodate a wide range of diagnoses, making it an ideal solution for individuals with changing needs.

Product highlights:

- Ability to adjust the force required when using as a proportional input
- The ASL FUSION Display, Programmer and Attendant Control includes a quick release mount that enables attendant driving and hand held programming
- Easy to use swing-away hardware
- Ball joints on the hardware and head array provide simple and secure positioning
- Built in Bluetooth, when used in conjunction with other ASL accessories, allows for wireless access to AAC devices and other switch operated accessories
- Soft pads for maximum user comfort

Total Control Head Array

The Permobil Total Control Head Array offers a non-proportional digital solution, featuring both proximity sensor and mechanical switch options that can be easily configured to meet a variety of user needs.

Product highlights:

- BodiLink MAX 8 mounting hardware offers superior strength and adjustability for reliable positioning
- Optional BodiLink flip-down mounting hardware for scenarios where the head array needs to be fully cleared from around the individual’s head
- Fully adjustable swing-away lateral arm hardware for ease of side sensor positioning, featuring an easy-to-operate release mechanism
- Occipital pad cover improves comfort and reduces friction
- Streamlined design

Sip & Puff

For individuals with no functional extremity control, Sip & Puff translates breath pressure into switch inputs for driving control and other wheelchair functions. The 4-pressure breath control is customized to each individual through wheelchair programming.

Adjustable mounting hardware easily swings away

Switch options

For individuals who use a mode switch in combination with their drive control, who may require direct access to power seating functions, or who require a switch for other reasons, Permobil offers switch options to meet a variety of needs.

Microlight

Buddy button

Egg Switch

Mini Cup

Proximity sensor

Mini joystick 5-switch

Foot Control

Designed to attach to the footplate receiver, the Permobil Foot Control is ideal for individuals who have the most reliable strength and range of motion in their foot. Includes the ability to make adjustments to address the individual's available range of movement.
