# Fleet Management

permobil

# Redefining service

Fleet Management gives service providers access to valuable wheelchair data and analytics. Battery system information, fault codes, actuator function, motor current and order history are transmitted automatically, improving remote diagnostic and service capabilities for your clients' connected wheelchairs.
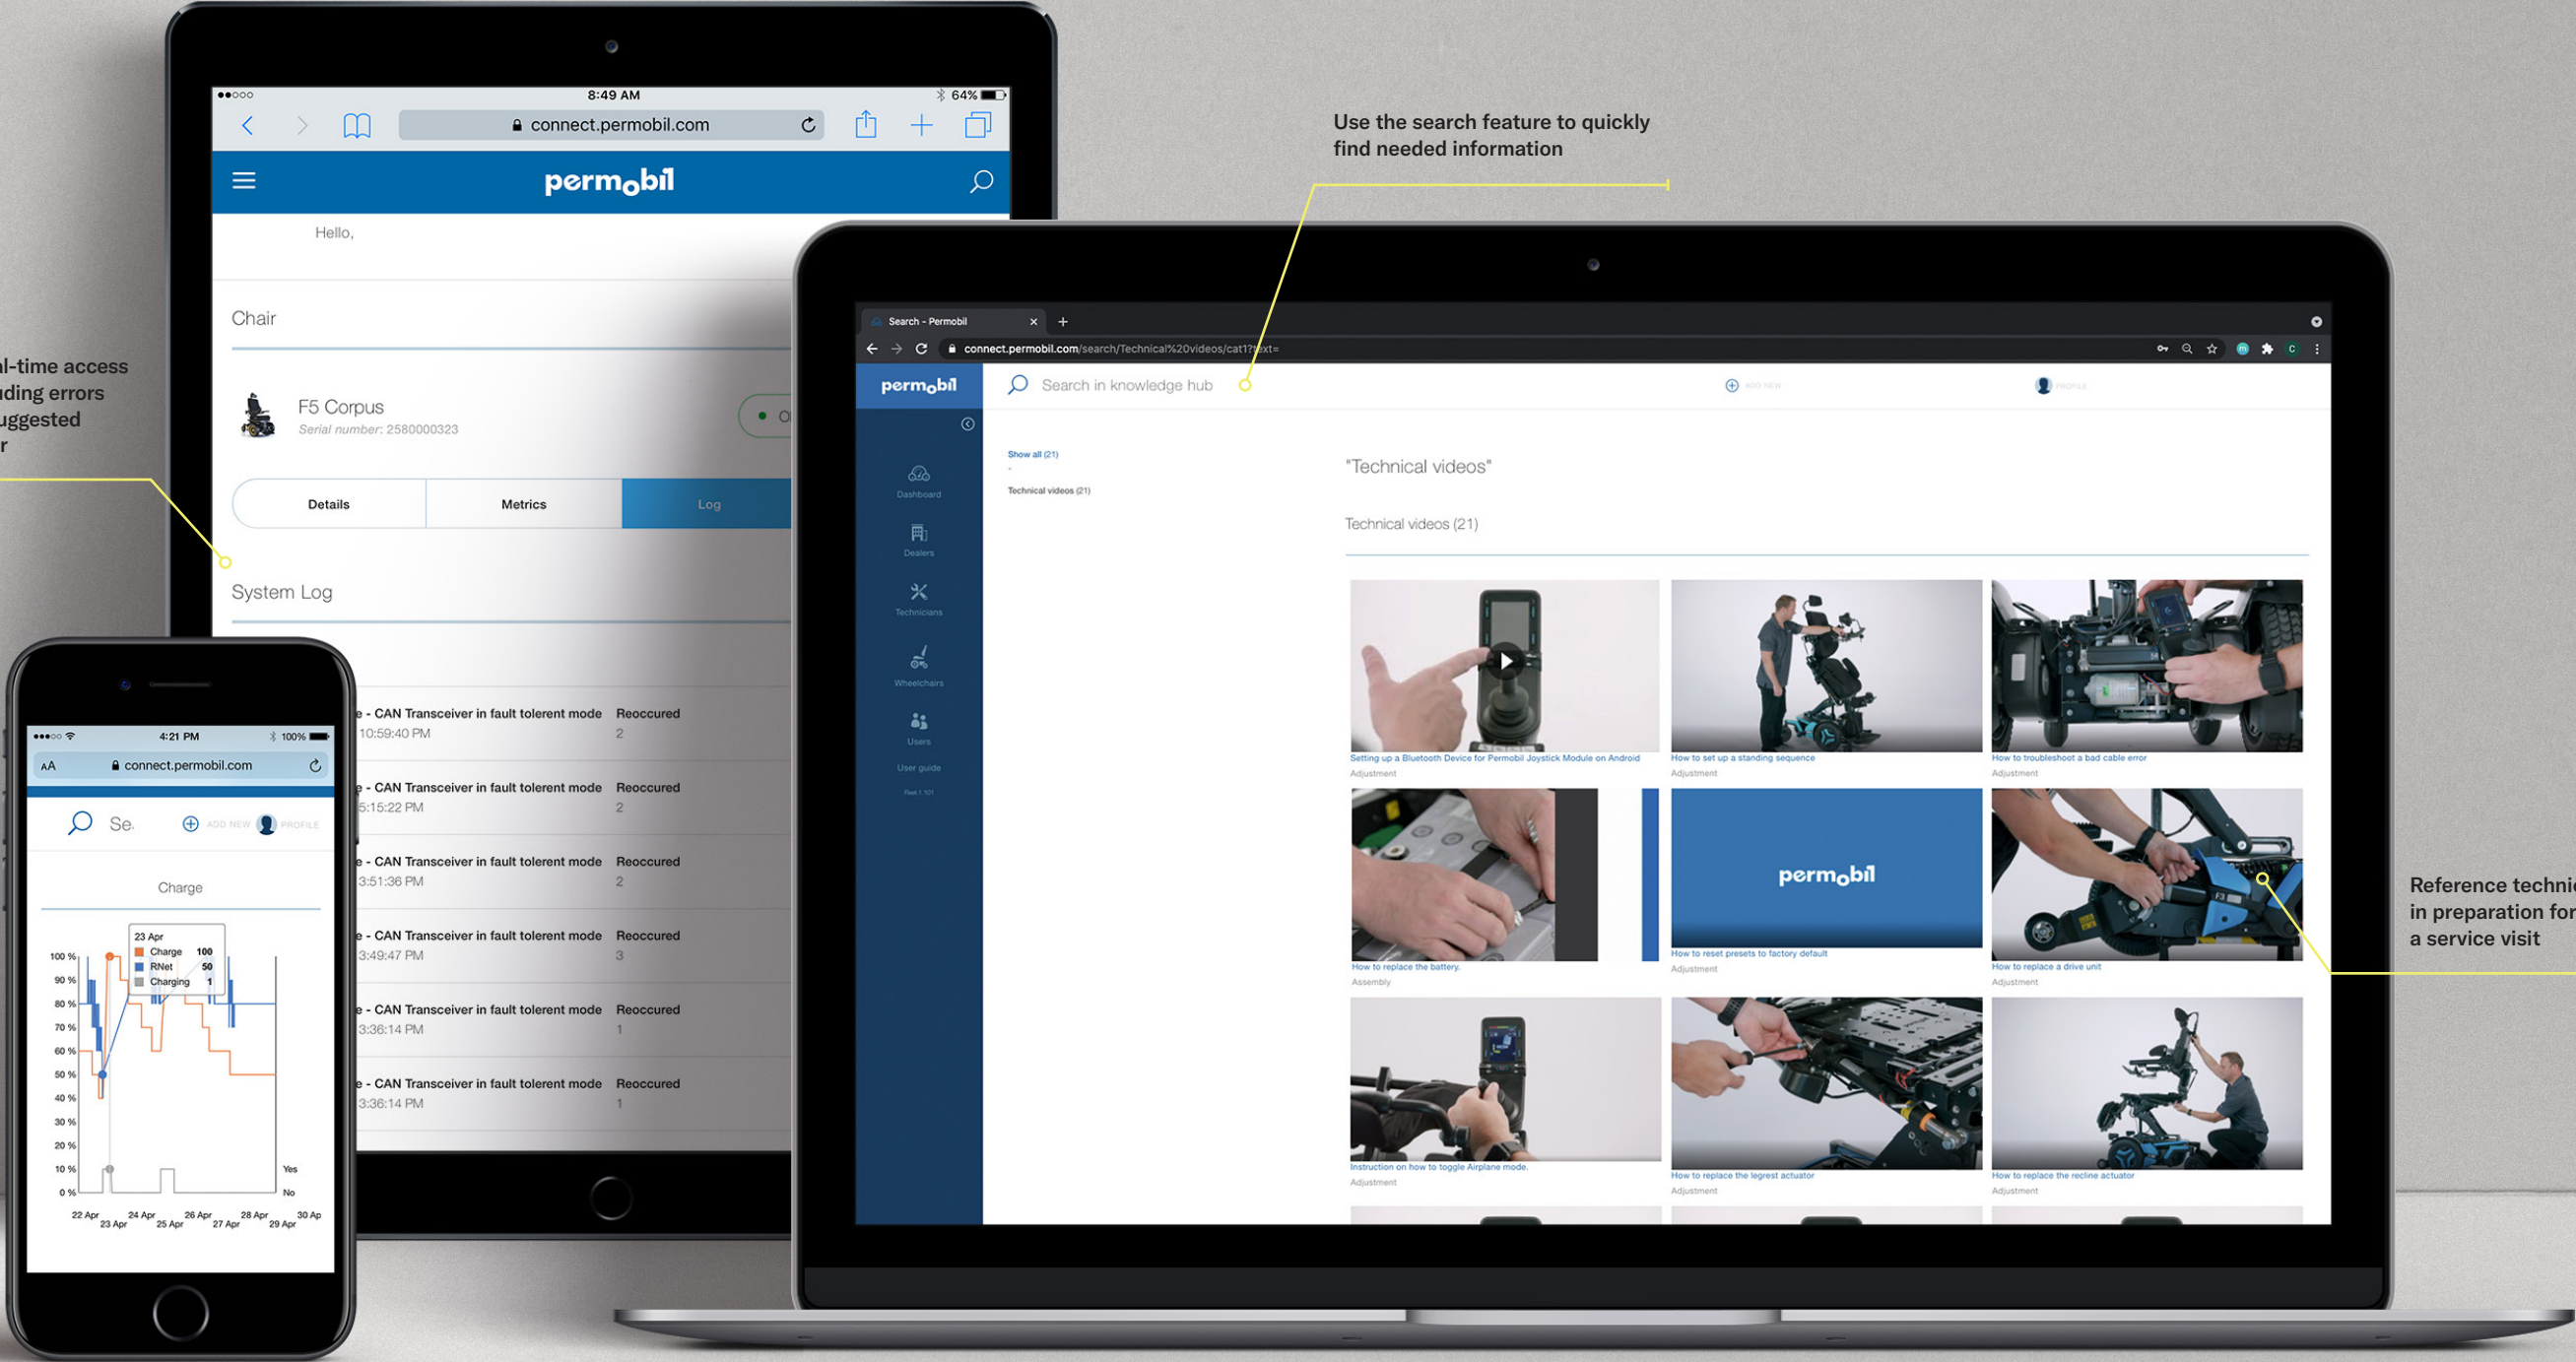

# Knowledge Hub, resources you need in one convenient location

Strengthen the remote diagnostic and service process with easy access to manuals and technical videos in the Fleet Management Knowledge Hub.

Use the system log for real-time access to system messages, including errors and warnings, plus view suggested actions to remedy an error

Use the search feature to quickly find needed information

Reference technical videos in preparation for or during a service visit

# Get started today.

Fleet Management creates a more reliable and convenient service experience and, unlike other systems, does not require use of the client's Wi-Fi or data to transmit valuable wheelchair diagnostic information.

1. Sign up for access to Fleet Management.

2. Have the client download the MyPermobil app to activate the wheelchair at delivery and collect chair data and analytics from day one.

3. Utilize the Fleet Management portal to inform remote diagnostics and create a proactive service experience for your customers.
